

Daf v3 Testing Checklist

Live acceptance run

About 45 minutes

Full evals: evals/evals.json

Run in a **fresh chat** with the skill installed. Check the box when the behavior is right; note anything off in the margin.

1. Core lesson and follow-ups (one chat, in order)

- ☐ `/daf Chullin 23b`: v2-quality lesson, no Yomi material, menu of all 7 options, one progress line
- ☐ `4`: Tosafot addendum only; no repeated header, Mishnah, takeaways, or preview; menu shrinks to 6
- ☐ `5 7`: one addendum, Rishonim then parallels; every Rishon cited from a retrieved text
- ☐ `2`: PDF includes lesson and both addenda; no menu or progress line in the PDF
- ☐ `1`: MP3 plus script; terms sound acceptable; length reported
- ☐ `/daf Berakhot 2a tosafot`: menu omits option 4, other numbers unchanged
- ☐ `/daf yomi rishonim export`: dates and siyum context intact; Rishonim section; PDF delivered

2. ByMishnah accuracy (check against a printed Gemara)

- ☐ `/daf bymishnah Berakhot`: "Mishnah 1 of N" with N matching a standard Mishnah; Gemara runs from 2a to where Mishnah 1:2 begins on 9b
- ☐ Long unit is split into parts and the position does not advance after Part 1
- ☐ `/daf bymishnah Sanhedrin 10:1`: notes the Bavli prints Chelek as the eleventh perek
- ☐ `/daf bymishnah Peah`: explains there is no Bavli Gemara; does not guess
- ☐ Next-session preview names the next Mishnah and its position

3. Log across chats

- ☐ Chat A: `/daf bymishnah Chullin`
- ☐ Chat B: `/daf log` knows you finished Mishnah 1
- ☐ Chat B: `/daf continue` teaches the second unit, not the first
- ☐ `/daf log reset Chullin` asks before clearing
- ☐ `/daf Chullin 24a nolog` records nothing

4. Natural-language triggering

- ☐ "I want to start learning Chullin mishnah by mishnah"
- ☐ "Where am I holding in my learning?"
- ☐ "Can I get today's daf as audio?"
- ☐ "Go deeper on the Rashbas on this daf" (after a lesson)

5. Guardrails

- ☐ `/daf NotAMasechet 23b` asks for a valid masechet
- ☐ `more halacha on Chullin 23b` in a new chat gives a standalone discussion, not a full lesson

Record issues as: command, what happened, what should have happened. Paste them back to Claude for a fix and repackage.
